

CARR-1427

Rachel Mitten House
Westminster

c. 1854-1856

Summary:

The Rachel Mitten House is located on a lot that was sold at public sale to William Reese for \$111 in October 1852. Just over a year later Reese sold it to Noah Mitten for \$200. The price suggests that there were likely no improvements to the lot. Noah Mitten sold the lot in August 1856 to his mother, Rachel Mitten, for \$400. This probably indicates the construction of the existing log house, then, between 1854 and 1856 for Rachel Mitten. In order to purchase the house, Rachel Mitten borrowed \$100 from her daughter, Christena Mitten. Rachel Mitten died in early 1860. Christena Mitten apparently was living here and continued to do so. The house was advertised for sale in November 1868. In 1877 it was purchased by Sarah A. Miller of Baltimore City and apparently became a rental property. She sold it in 1907 to William Eckard, and it remained in his family until very recently. The main block of the house retains most of its original features and illustrates well a very average house of the period just prior to the Civil War, one that was apparently built for a widow and her unmarried daughters, if not by them.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Summary:

The Rachel Mitten House is located at 317 East Main Street in Westminster, in central Carroll County, Maryland. The house faces southwest toward the road and is a two-story, three-bay by one-bay log structure with a rubble stone foundation, aluminum siding, and a gable roof of pressed metal shingles. There is a two-story, four-bay by one-bay ell on the rear or northeast elevation. On the southwest elevation the first story has a center entrance with a twelve-light door. The surround has fluted Doric pilasters. There are new 1/1 sash. There is a cellar under the main block of the house only. The first story has a hall-parlor plan with an ell. The front door opens into the northwest room. The northwest wall has a closed-off fireplace with a wood mantel. In the wall a horizontal beam is exposed that probably indicates a log structure. North of the fireplace is an enclosed winder stair. The ell has been remodeled as a kitchen. This was originally two rooms. The northeast end appears to be a frame addition. The second-story plan is identical to the first, but with two rooms in the ell. The southwest ell chamber possibly originally had a lower roofline and the roof was raised to make it a full two stories. The attic is not floored.

Contributing Resources: 1

The Rachel Mitten House is located at 317 East Main Street in Westminster, in central Carroll County, Maryland. The house faces southwest toward the road and is a two-story, three-bay by one-bay log structure with a rubble stone foundation, aluminum siding, and a gable roof of pressed metal shingles with a northwest-to-southeast running ridge. There is a two-story, four-bay by one-bay ell on the rear or northeast elevation. It also has aluminum siding and has a standing-seam metal gable roof with a northeast-to-southwest ridge.

On the southwest elevation, the foundation has a cast iron grate in the west bay that has a circle in the center, with diamond-pattern openings, and it is hung on hinges. The first story has a center entrance with a twelve-light door. The surround has fluted Doric pilasters. The capitals have a Greek ovolo above a quirked Greek ogee and bevel. There is an ogee moulding on the cornice with a fillet below. There is a new 1/1 sash on either side of the doorway. The second story has three new 1/1 sash. There is an interior brick chimney on the northwest. The southeast elevation has no openings, as there is only about 18 inches between this house and the house to the east.

The northwest elevation on the first story has a new 1/1 sash set west of center. The second story has no openings, and the gable end has a four-light sash set west of center. The

MARYLAND HISTORICAL TRUST
STATE HISTORIC SITES INVENTORY FORM

Survey No. CARR-1427

Description (continued)

Section 7 Page 2

northwest elevation of the ell on the first story has a projecting one-bay room with a 6/6 sash to the north. The southwest elevation of this projecting room has a beaded-edge, vertical-board door hung on cast iron butt hinges. The cast iron rim lock is marked "PATENTED MAY.3.18[63?] JUNE[7?]18[64?]". The architrave has a beaded interior edge, but the rest of it is covered now. There is a one-story porch on the first story between the projecting bay to the north and the main block to the west. This porch has three square boxed posts and a shed roof with asphalt shingles. The three bays of the first story have paired 6/6 sash, paired 6/6 sash in the center, and a fifteen-light door to the west that has an architrave that is covered and does have a beaded interior edge. There is a hatch in the deck of the porch that leads to the cellar stairs. The second story, north, north-center, and west bays, each have a six-light casement.

The northeast elevation of the main block has no openings on the first story. The second story has a 6/6 double-hung sash in the north bay. The northeast elevation of the ell has an interior brick chimney centered on the ridge. The first story has no openings. The second story has a 6/6 sash set east of center.

There is a cellar under the main block of the house only. The northwest end of the cellar has corbelled stone and brick that supports the fireplace above. The brick may have been added when the furnace was connected into the flue. There is a metal plate for a clean-out over the brick, and it is painted with "SMITH & REIFSNID" and "WESTMINSTER MARY"; soft mortar is used in the brick. The joists run northeast to southwest, and are hewn on top and bottom. They are 9 to 11 inches wide. The depth could not be determined, and they are spaced 28 inches on centers. They rest on an approximately 1-inch-thick board set on the foundation. There is a crawl space under the ell that has sawn joists approximately 2 x 8 inches. They appear to be mill sawn, but there are not a lot of clear tool marks.

The first story has a hall-parlor plan with an ell. The front door opens into the northwest room. The northwest wall has a closed off fireplace with a wood mantel that has plain thin pilaster strips and a plain frieze. There is a plain fillet bed mould. Above the window on the northwest elevation is a hole in the plaster wall, in which a horizontal beam is exposed that probably indicates a log structure. There is vertical sawn lath with cut nails, and no clear saw marks were visible on the lath. North of the fireplace is an enclosed winder stair with a beaded-edge, vertical-board door hung on plain cast iron butt hinges. It has a cast iron suffolk latch. The hinge screws are not pointed. The architraves have a broken field with a beaded interior edge and are mitered at the corners. The baseboards are plain. The floor is covered, and some of the walls have been sheet-rocked. The southeast wall has a doorway with the same architrave.

MARYLAND HISTORICAL TRUST
STATE HISTORIC SITES INVENTORY FORM

Survey No. CARR-1427

Description (continued)

Section 7 Page 3

The southeast room has the same architrave and baseboard. There is a door to the ell on the northeast that has beaded edge vertical boards, plain cast iron butt hinges, and a cast iron suffolk latch like that on the stair door. The ell has been remodeled as a kitchen. There is apparently a fireplace centered on the northeast wall, but it has been covered over. There is a winder stair in the east corner that has been opened up. The stair stringer is mill sawn. There is a beaded-edge, vertical-board door on cast iron butt hinges that has a cast iron foliate handle. There is a closet under the stairs. The hinges have pointed screws. There is a hewn joist in the ceiling of this closet that is now exposed. The southeast wall is narrower on the northeast half of the room than it is on the southwest half of the room, suggesting that this was originally two rooms. The northeast addition appears to be frame, as there is a sawn stud in the southeast wall, and because the southeast wall was thinner on the northeast section than it is on the southeast section.

The second-story plan is identical to the first, but with two rooms in the ell. The second-story walls have vertical lath. Most have straight diagonal saw marks, but one appears to be circular sawn. They are fastened with cut nails. The northwest chamber at the top of the winder stair has three horizontal rails around it and a gate with five rails that are mortised-and-tenoned-and-pegged into end stiles. The gate is hung on small cast iron butt hinges. It is unique and seems to be early, if not original. There is a chimney on the northwest, and next to it a hatch in the ceiling that leads to the attic. The wall on the southeast has a beaded-edge, vertical-board door. It has butt hinges that appear too shiny to be cast iron. It has a cast iron suffolk latch like those found on the first story. The architraves have a beaded interior edge and are mitered at the corners. The baseboard is plain.

The southeast chamber has random-width flooring that appears to be pine. It is 3 to 4½ inches wide and runs northwest to southeast. The southeast chamber has a peg rail on the northwest wall. It has the same baseboard and architrave as found in the northwest chamber. There is a door on the northeast wall that leads to the ell. The architrave here has a small, beaded interior edge that is different than the rest of the room, indicating this is not an original opening. The beaded vertical-board door here is hung on plain cast iron butt hinges. They are two-part hinges. The latch is a cast iron foliate one, like on the closet of the first story ell.

In the southwest ell chamber, the northwest and southeast walls are wider at the bottom, and are wider toward the southwest end. They have a board shelf, then a narrower wall above this shelf. Possibly this room originally had a lower roofline and the roof was raised to make it a full two stories. There is a six-light sliding sash turned on its side and used as a casement with cast iron butt hinges on its face. The screws are pointed, but not well done. They are narrower at the tip, but are partially blunt. The ceiling follows the

MARYLAND HISTORICAL TRUST
STATE HISTORIC SITES INVENTORY FORM

Survey No. CARR-1427

Description (continued)

Section 7 Page 4

rafters and collar beam. There is a doorway on the northwest. It has a beaded-edge, vertical-board door hung on plain cast iron butt hinges, and has a cast iron suffolk latch with a hollowed-out handle. The window architrave is plain, and is headcut. The door has the same trim.

The northeast ell chamber floor level is higher than in the southwest ell chamber. It has tongue-and-grooved boards, $3\frac{1}{4}$ to 5 inches wide, that run northeast to southwest. The northeast ell chamber has the same window sash and trim as the southwest ell chamber, but has different butt hinges on the face of the sash. There is a full 6/6 sash on the northeast wall that also has the same trim as the others in this chamber. The ceiling profile is the same as the other ell chamber. The winder stair in the east corner is open at the top, and has a balustrade with three rails.

The attic is not floored. The joists run northeast to southwest and are very regular. They must be sawn, but no marks are visible. Only one joist could be measured. It was 3 x $5\frac{1}{2}$ inches. The studs on the northwest wall are sawn and are about $2\frac{1}{2}$ by $2\frac{3}{4}$ or $2\frac{3}{4}$ by 3 inches. They are toenailed with cut nails. The rafters are sawn and are $2\frac{1}{2}$ to 3 inches by 3 inches. They are mitered at the ridge with a pole, and are spaced $21\frac{1}{2}$ to 25 inches on centers. There is a board nailed to the ends of the joists and a narrow false plate nailed on top of this board. It is approximately 1 inch square. The rafter feet have a birdsmouth cut that laps over this falseplate. The northwest end girt is hewn on all four sides. The rafters support lath with cut nails, and have later sheathing boards placed between them.

The southwest floor is random width, some of them being 5 inches, but many are 11 to $12\frac{1}{2}$ inches wide. They run northeast to southwest. The east corner has infill in the floor that is nailed down with cut nails. The opening was $22\frac{1}{2}$ inches by 55 inches, which was large for a chimney unless this was a cooking fireplace. There is a trap door on hinges in the southeast end near the south corner. The header in the opening appears to be nailed in from the top through the joists and is probably mortised and tenoned. The trap door does not have battens on its bottom side. There are wide boards on either end with a narrow board in the center. The narrow board has tongues and the wider boards have grooves. The door was nailed down with cut nails and a later joist infill was beneath it to hold the lath for the ceiling infill on the first story in the ell. The lath is sawn, but there are no clear marks. The southeast wall inside the opening in the floor has vertical lath, suggesting that this is a log wall.

The Rachel Mitten House is located on a lot that was sold at public sale to William Reese for \$111 in October 1852. Unfortunately, there are no surviving papers to document what existed on the site at that time, but Reese already owned a brick house and dry goods business. Just over a year later Reese sold it to Noah Mitten for \$200. The price suggests that there were likely no improvements to the lot. Noah Mitten sold the lot in August 1856 to his mother, Rachel Mitten, Senior, (widow of Miles Mitten), for \$400. This probably indicates the construction of the existing log house, then, between 1854 and 1856 for Rachel Mitten. In order to purchase the house, Rachel Mitten borrowed \$100 from her daughter, Christena Mitten.

STATE HISTORIC SITES INVENTORY FORM

Survey No. CARR-1427

Significance (continued)

Section 8 Page 2

Rachel Mitten died in early 1860. In her will she left her clothing to Christena, and then noted:

"Whereas I am seizes and possesses in fee simple of a House and lot of land, situate in the City, County and State aforesaid, which I purchased from my son Noah Mitten. . . And whereas I am indebted unto my daughter Christena Mitten in the sum of One hundred dollars. . . and which said sum of money I heretofore appropriated towards the purchase of said House and lot of land . . . I hereby will, devise and bequeth aforesaid House and lot of land, together with my whole personal estate, of every description, unto my said daughter Christena Mitten for and during the term of her natural life. If . . . at the death of my said daughter Christena Mitten my said daughters Martha Mitten and Rachel Mitten, or either of them should be living and be unmarried, then and in that case I will devise and bequeath my aforesaid House and lot of land together with so much of my goods and chattels as may then be undestroyed, unto them my said daughters Martha Mitten and Rachel Mitten during the time they shall afterwards remain unmarried. . . ."

The personal estate was not large, but was comfortable, and included:

French Post Bedstead	\$ 3.00	Dining table	4.50
Common " "	2.00	Stove & pipe	4.00
Cooking Stove & fixtures	5.00	1 Bureau	6.00
Dining table	1.50	½ Doz. chairs	3.00
Kitchen Do	.75	3 old chairs	.75
2 Benches	.37½	1 Rocking Do	.75
Kitchen Safe	1.50	Fether bed pillow	
Wooden chest	\$.75	& bolster	15.00
		2 Chairs 40	.80

Christena Mitten apparently was living here and continued to do so, as in 1866 her log house and lot were assessed for \$1,000, then re-evaluated and marked down to \$800. The house was advertised for sale in November 1868, and was described as ". . . a two story LOG HOUSE, with back building attached, and the Lot on which the house is built, situated in the East End of Westminster." The lot contained a well and fruit trees. After its sale, executor Daniel Mitten reported to the Orphan's Court that he was ". . . Empowered. . . to dispose of a House + lot . . . after the death of Christena mitten and marriage of her sisters Rachel & Martha, all of which said Events have transpired. . . ."

The house was purchased by Reuben W. Stem for \$800. Stem mortgaged the property in April 1876, then defaulted and was forced to sell. The sale ad in 1877 does not

MARYLAND HISTORICAL TRUST
STATE HISTORIC SITES INVENTORY FORM

Survey No. CARR-1427

Significance (continued)

Section 8 Page 3

mention the lot with the house, for unknown reasons, but it was purchased by Sarah A. Miller of Baltimore City and apparently became a rental property. She sold it in 1907 to William Eckard, and it remained in his family until very recently. It appears that the house originally had one smaller, one story and attic room on the rear, and that this was expanded with an addition to the rear and the creation of a full second story above. The additions appear to be of frame. these changes were made prior to 1918, judging from the Sanborn Fire Insurance Maps, but at present can not be more carefully dated. The main block of the house has had some sheetrock added to the walls, and floors and ceilings covered, but otherwise retains most of its original features and illustrates well a very average house of the period just prior to the Civil War, one that was apparently built for a widow and her unmarried daughters, if not by them.
